PROFILE

As an aspiring **Flutter Developer**, I am passionate about creating smooth, responsive, and user-friendly mobile applications. I have completed **First year of B.Tech in Computer Engineering** and am currently pursuing my **Bachelor of Computer Applications (BCA)**, which strengthens my technical foundation and problem-solving abilities.

With **6+ months of hands-on experience** in Flutter through training and self-made projects, I have gained solid knowledge of Dart, Flutter widgets, responsive UI development, Firebase Authentication, Firestore Database, and REST API integration. I have built real-use applications like a **Fruit Mart app** and an **Expense Tracker app**, focusing on performance, clean code, and practical functionality.

I am familiar with state management approaches such as **Provider & GetX**, and I continuously explore best practices, debugging techniques, and app architecture improvements. With a strong interest in mobile development and a commitment to learning, I am looking for an opportunity to grow and contribute as a **Flutter Developer** in a professional environment.

PROFESSIONAL EXPERIENCE

04/2024 – 12/2024
Bhavnagar

Apex Software House
Flutter developer

- Developed cross-platform mobile apps using **Flutter & Dart** with a focus on performance and clean UI.
- Implemented state management using **GetX**, for scalable app architecture.
- Integrated **Firebase Authentication, Firestore, and REST APIs** for backend connectivity (Little bit of PHP).
- Optimized app performance through debugging, testing, and code improvements.
- Created reusable widgets and followed clean coding practices with Git version control.

EDUCATION

07/2024 – Present
Bhavnagar

Maharaja Krishnakumarsinhji Bhavnagar University
Bachelor of Computer Applications (BCA)

08/2022 – 1/2024
Bhavnagar

Gujarat Technological University
Bachelor of Engineering

SKILLS

Flutter	Dart	State Management (Provider / GetX)	REST APIs	Firebase	HTML
CSS	JS	Core Java	Git		

PROJECTS

Fruit Mart App

A simple and clean UI-based fruit shopping app built using **Flutter** with **Stateful Widgets**. Includes product listing, basic cart flow, and smooth navigation with a focus on responsive layout and user-friendly design.

Expense Tracker App

A personal finance management app developed using **Flutter (MVVM architecture)**. Features add/view/delete expenses, category-wise tracking, and local data handling with a structured and maintainable codebase.

FocusSprint App

A productivity and task management app built using **Flutter with Provider state management**. Includes task creation, progress tracking, and a clean, minimal interface optimized for daily usage.
